

CAPACITOR

Abstract of the Disclosure

The invention provides a ceramic capacitor comprising a ceramic dielectric body and at least two spaced-apart electrodes in contact with the body wherein at least 80 weight percent of the body consists of alumina, said body further comprising at least 0.5 BaTiO₃ w/w%, at least 0.5 w/w% MgO, < 0.05 w/w% SiO₂, at least 4.5 w/w% ZrO₂ and at least 0.07 w/w% HfO₂.
